Adjustable Levers, Adjustable Handles, Adjustable Clamping Levers & Hand Levers

Adjustable levers are clamping components that offer a ratcheting feature that is especially useful in tight spaces. Their design also allows for easier visual adjustment to specific positions, and their ergonomic shape makes them user-friendly. They are ideal for situations where more torque is required than can be achieved with a simple knob.

We offer a great number of these useful machine parts, all with attractive, ergonomic designs. Metal adjustable levers are available in zinc die-cast with steel or stainless steel components or in all stainless steel. They have angled or straight handles, tapped inserts or studs, and come in a broad range of sizes. Likewise, our nylon plastic adjustable levers are offered with steel or stainless steel components or in all stainless steel, also with angled or straight handles, tapped inserts or studs, and a wide range of sizes. Both plastic and metal levers are offered in an innovative push-button version as well.

For heavy-duty applications, we have a selection of steel and stainless steel adjustable levers with ball handles, both angled and flat, in tapped and stud varieties and a large range of sizes. Lastly, included in this section are our interchangeable insert ratchet wrenches.

Special modifications available:

- stud lengths/configurations
- threads
- bore sizes
- hub lengths
- cross holes
- set screw holes
- colors
- kitting, packaging and labeling
- assembly

Adjustable levers are also referred to as:

adjustable handles, clamping levers, hand levers, adjustable clamping levers, adjustable tension levers, clamp levers, ratchet handles, ratcheting handles, ratcheting levers, spring loaded adjustable levers, and spring loaded levers
